

BioGuano Program for Shrubs and Large Trees

Growing large shrubs and trees at home requires careful planning and maintenance to ensure their healthy growth and long-term amenity.

- Seek advice from your local garden centre about shrubs and trees that are suitable for your climate, soil type, and available space.
- Consider mature plant size and location of underground services and whether your chosen shrubs and trees have adequate space to reach full size.
- Prior to planting, loosen and amend the soil with compost or aged manure to improve drainage, fertility, and overall soil health.
- Newly planted shrubs and trees require regular watering until they establish a strong root system. Water deeply and less frequently, allowing the soil to dry slightly between watering sessions.
- Organic mulch helps conserve moisture, suppress weed growth, and regulate soil temperature but keep mulch about 20 cm away from the trunk to avoid collar rots.
- Remove dead, damaged, or diseased branches and trim excess growth using pruning techniques appropriate to the plant species.
- Some large shrubs and trees may require support from stakes, cages or a trellis as they grow, to prevent damage from wind or heavy rain.
- Twice annually, apply organic fertiliser suitable for the needs of your shrubs and trees. Supplement with BioGuano liquid fertilisers. Avoid over-fertilisation, as it can lead to excessive, uneven growth and nutrient deficiencies.
- Watch for pests or diseases and apply organic control measures to prevent further damage. Proper maintenance, including regular pruning and appropriate watering, can also help minimize the risk of pest and disease problems.

Choosing a BioGuano liquid fertiliser maintenance program will reward you with strong and healthy trees and shrubs.

- Stimulates photosynthesis for greener, larger leaves and stronger trunks.
- Flowering additive for bigger, brighter and more colourful flowers,
- A separate organic Nitrogen Formula to allow precise control of nitrogen
- Added seaweed and humates to stimulate the root system and reduce stress from periods of heat, cold, dry and pest and disease attack,
- Organic carbon to improve soil health in all soil types,
- Promotes healthy growth without excessive foliage,
- Natural source of trace elements to support the major nutrients.

Seasonal Timing	Recommended Usage Rate		Comments
	BioGuano+	BioGuano NF	
Spring & Summer	15 mL	30 mL	Per 9 L Watering Can spread over 2-4 m ² . Repeat every 1-2 weeks or as required.
Autumn & Winter	30 mL	15 mL	
Foliar Sprays	3 mL/L	3 mL/L	Apply to foliage in the morning or mid-afternoon. Delay sprays on hot days (over 28°C). Safe to pollinators and beneficial insects.
NF = BioGuano Nitrogen Formula an organic, easily absorbed nitrogen and potassium fertiliser.			
Note: Shake Well, 1 Cap = 15 mL
